

Energy Policy

We at JSW Steel, strive for global recognition and operational excellence by setting objectives and targets to achieve the lowest specific energy consumption and taking proactive initiatives to combat climate change.

We are committed to:

- Drive energy conservation and achieve efficiency of our operations through the deployment of innovative and reliable practices, which enable continual improvement of energy performance and energy management system.
- Achieve improvements in energy performance through resource optimization, deployment of latest technologies and energy uses in a cost-effective manner.
- Ensure that appropriate resources are deployed, and information is communicated to all the stakeholders to support the achievement of energy objectives and targets.
- Comply with applicable statutory, regulatory, and other requirements related to energy efficiency, energy use, and energy consumption and strive to benchmark our performance with global peers.
- Train and engage with relevant stakeholders in building responsible behaviors in energy use and energy consumption to purposefully deploy energy conservation measures.
- Reinforce in design, procurement, and installation of energy-efficient plant, equipment, resources, and other services and manage changes in current operations as well as future expansions in a manner to mitigate impacts on energy performance.
- Harness green, clean, or renewable or waste energy sources and aimed at environmental protection and thereby contributing for energy security for sustainable growth.
